

nanort::StackAllocator
::allocate

nanort::StackAllocator
::deallocate

nanort::StackAllocator
::Source::stack_buffer

```
graph LR; A[nanort::StackAllocator::allocate] --> C[nanort::StackAllocator::Source::stack_buffer]; B[nanort::StackAllocator::deallocate] --> C;
```

The diagram illustrates a memory management setup. On the left, two white rectangular boxes represent functions: 'nanort::StackAllocator::allocate' (top) and 'nanort::StackAllocator::deallocate' (bottom). On the right, a gray rectangular box represents a source buffer: 'nanort::StackAllocator::Source::stack_buffer'. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both the allocate and deallocate functions interact with or access the shared stack buffer.
